SAURAV CHANDER SHARMA

Toronto, ON • chandersaurav2016@gmail.com
LinkedIn: https://www.linkedin.com/in/saurav-chander-sharma/ **GitHub:** https://github.com/Saurav-Sharma100

Junior Data Analyst with hands-on experience in SQL, Python, Power BI, Tableau, BigQuery, and dbt through real-world analytics projects and an industry internship. Skilled in transforming complex data, building analytical models, and developing dashboards that uncover business insights and support data-driven decisions.

TECHNICAL SKILLS

Programming: SQL, Python
Data Visualization: Power BI (DAX), Tableau, Microsoft Excel
Python Libraries: Pandas, NumPy, Matplotlib, Seaborn
Data Warehousing & Cloud: Google BigQuery, Snowflake
Data Transformation & Modeling: dbt Core, Data Modeling, Star Schema, Power Query, Tableau Prep
Analytics & Applications: Streamlit, Vanna AI, Data Cleaning, Exploratory Data Analysis (EDA), KPI Development, Statistical Analysis

WORK EXPERIENCE

Data Analytics Intern | Bharat Heavy Electricals Limited (BHEL) **February 2022**

- Cleaned and validated COVID-19 datasets using SQL, identifying missing, duplicate, and inconsistent records to improve data accuracy and reliability.
- Wrote SQL queries to filter, transform, and organize data used by the Digital Transformation Group (DTG) for internal reporting and web-based applications.
- Supported the Digital Transformation Group (DTG) with data preparation, validation, and maintenance while contributing to ongoing digital initiatives.

PROJECTS

Ecommerce Analysis on Google Analytics Data | BigQuery, dbt, Power BI, Vanna AI | Link **August 2026**

- Analyzed **GA4 ecommerce data**, identifying an approximately **72% drop-off from product views to add-to-cart**, highlighting the largest bottleneck in the purchase funnel.
- Built a **dbt Core and BigQuery analytics pipeline** using staging, intermediate, and mart layers, transforming nested GA4 events into **3 fact tables and 5 dimensions** with data-quality testing.
- Developed **3 Power BI dashboards** for acquisition, funnel, and product analysis, integrating **Vanna AI** to enable natural-language SQL queries against curated analytics marts.

Fintech Payments and Customer Segmentation | BigQuery, SQL, Power BI | Link **August 2026**

- Analyzed **416,747 transactions across 5,000 merchants**, identifying a **5.08% payment failure rate** and **2,322 payment-related support tickets** to highlight operational risks.
- Developed **RFM customer segmentation and health scoring** in BigQuery SQL, integrating payment failures, support tickets, and disputes into a **star-schema data model**.
- Built an interactive **Power BI dashboard** tracking **$19.07M in transaction volume and $4.1K in at-risk MRR**, supporting payment-performance monitoring and targeted retention decisions.

Bank Branch Expansion Analysis | Python, Tableau, Streamlit | Link **July 2026**

- Analyzed **73,876 bank branches across 17,971 U.S. ZIP codes**, identifying that **16% of ZIP codes held 80% of deposits** to guide branch expansion decisions.
- Developed a **Python opportunity-scoring model** combining deposit potential and branch density and built a **Tableau dashboard** to identify underserved banking markets.
- Developed an interactive **Streamlit simulator** | **Link** using greedy optimization and Haversine distance to recommend branch locations for a **simulated $15M expansion budget**, accounting for **$2M per branch** and geographic spacing constraints.

EDUCATION

Bachelor of Technology in Computer Science & Engineering | **Galgotias University, India** **2018–2022**
Postgraduate Certificate in Project Management | **Algoma University, Ontario, Canada** **2023–2025**
